

Economic Importance of Hunting in America

Mark LaBarbera, Outdoor Heritage Education Center

Introduction

Kelly Heath of rural Millston, Wisconsin, drove 80 miles round trip to the Gander Mountain store in Eau Claire to buy the Remington 870 that best fits her. She made the trip many times, once to purchase her new Mathews bow and accessories, and another time to buy Flambeau decoys. Her spending is driven by her desire to spend her spare time relaxing in peaceful natural surroundings with the added anticipation of getting close enough to game to get a clean shot. As she gears up to step outside with her hunting partner, Pat, she creates a sale, which provides profit for the store's corporate headquarters in Bloomington, Minnesota and for manufacturers in places like North Carolina, Wisconsin and Ohio. In turn, these companies buy supplies and pay employees. Kelly's money helps salesmen, distributors and truck drivers who deliver the hunting gear. Add together what Kelly spends by the number of times each year she stops at that Gander Mountain store, or the Flying J Truck Stop & Restaurant up the road, where she buys food and fuel, and her expenditures add up. Now multiply it by 13 million hunters and you come up with a major boost for the economy. Purchases by hunters like Kelly touch all parts of the nation, from oil field workers in Oklahoma to the wheat growers of the central plains, plus all their employees and suppliers everywhere.

Hunting in America is big business, generating more than \$67 billion in economic output and more than one million jobs in the United States. The vast majority of Americans embrace hunting *lock, stock and barrel* for its social, cultural and conservation contributions.

Like baseball and apple pie, hunting is an American tradition shared by young and old, rich and poor, regardless of social or economic status. Hunting is not Democratic or Republican; it knows no geographic or congressional boundaries. Its history and heritage crosses all racial and ethnic boundaries.

Yes, it is big business, which generates \$25 billion in retail sales, \$17 billion in salaries and wages, and employs 575,000 Americans, creating sales tax, state income tax and federal income tax revenues for government agencies and the people they serve. But hunting is more than a positive economic force. It is also a strong, wholesome influence on American society. It is a healthy American activity, steeped in heritage, which touches the most important aspects of our lives, like families and friends, and a sense of stewardship for all things wild.

ABC's of a Hunting Economy

A is for Archers and other hunters, but "B" is for Billions of Big Buck items Bought from Businesses that Benefit from Buying by Bowhunters and other shooting sports enthusiasts. Yes, "B" is for Billions, as in the \$5.3 Billion hunters spend on hunting-related travel, and \$6.4 Billion on hunting equipment, plus \$8.4 Billion on other big-ticket items. So, then, is "C" for Cash, Check or Credit Card?

Hunting Is Good for Body and Soul

As the speed of business increases, and the pressures of global competition and consolidation in our high tech society put more demands on working women and men, hunting provides a healthy escape. It offers relaxation and affords quality time with family and friends. Whether in a deer or duck blind, farm field or ridgeline, hunting provides a peaceful, fun setting where people re-connect with each other and with nature.

It is no wonder that more than 13 million Americans age 16 and older hunted in 2001. When you look at hunting and target shooting combined, a 2001 Roper Starch study verified that more than 26 million Americans participated in all shooting sports. That same independent scientific research revealed that the public accepts the shooting sports just as it accepts tennis and golf.

Mark LaBarbera, Outdoor Heritage Education Center

Hunters—An Economic Power

And hunters are good for the economy. They not only purchase hunting gear, trucks and boats; they also fill their gas tanks and coolers. They stay at motels and resorts. They buy hunting clothes and those goofy hunting hats with sayings that are sometimes funny and always a conversation piece. On average, each hunter spends \$1,896 per year on hunting, which is 5.5% of the typical wage earner's annual income. These expenditures then "ripple" through the economy generating three times more impact for the U.S. economy. For many communities, hunting dollars keep them afloat.

Hunters also pay a truckload of special excise taxes. The Wildlife Restoration Fund under the Pittman-Robertson legislation collects these excise taxes on certain hunting equipment and apportions them to state natural resource agencies for conservation and education, which includes habitat restoration, shooting

Mark LaBarbera, Outdoor Heritage Education Center

- A hunter's best friend is his dog and they show it—hunters spend \$605 million on hunting dogs, well more than the \$513 million skiers spend on ski equipment.
- Each year hunters spend more money on food for hunting trips than Americans spend on Domino's pizza. Business generated by hunters is often the lifeblood of rural communities.
- Over a half million jobs in America are supported by hunters. That's more jobs than the combined employees of all the top U.S. based airlines including American, United, Delta, Northwest, Continental, US Airways, Southwest, Alaska Air and American West.
- The \$2.4 billion in annual federal income-tax money generated by hunters' spending could cover the annual paychecks of 100,000 troops. That's 8 divisions, 143 battalions, 3,300 platoons and some major money.

Source: Congressional Sportsmen's Foundation

ranges, wildlife research and more. For fiscal year 2002, this program delivered more than \$481 million to the states and territories of the United States, with more than \$292 million of it for sport fish restoration and more than \$188 million of it for wildlife restoration. Together, hunters and anglers may very well be the most important source of conservation funding in the United States.

Economic Impact Continues to Grow

In good times and bad, hunters set their sights on spending more time in the fields and forests. Even when economic recession and uncertainty over homeland security have the nation and the economy recoiling, hunters continue to aim their leisure time and money toward shooting sports activities. For example, since 1991, when the nation was mired in a similar recession and war, retail sales have grown nearly 17% (adjusted for inflation).

Many just do not realize the positive impacts generated by hunters. A recent report released by the Congressional Sportsmen's Foundation highlights that Americans spend more on hunting dogs than they do for ski equipment. If that's not enough, the \$2.4 billion in federal income tax revenue generated by hunters could cover the annual paychecks for 100,000 U.S. Army troops. At the state level, the hunter's economic effects can be especially important. In Georgia, for example, hunting expenditures were one-third greater than the value of this state's famous peanut harvest, providing a tremendous boost to rural areas. Those are the kinds of numbers that should turn the head of any state legislator or politician. And that's just the point.

“Does hunting drive the economy? You bet, especially in rural communities! A lot of us pay good money traveling and hunting on farms and ranches across the United States. And rural communities sure are glad to see us.”

Bill Miller, Executive Director,
North American Hunting Club

Mark LaBarbera, Outdoor Heritage Education Center

Sales and the Ripple Effect

The shooting sports are so much more than simply pulling a trigger or releasing a bowstring. They represent financial opportunity for every American community, especially rural economies. Each purchase made by hunters sets off a chain reaction of economic benefits.

When Marlin Firearms in New Haven, Connecticut, Leupold & Stevens in Beaverton, Oregon and Weatherby, Inc. in Atascadero, California pay their employees to produce hunting products, their employees use that money to buy food, clothes, housing and other goods and services. The stores, farmers, gas stations and others that make and sell those goods and services, in turn, spend their earnings, and a positive ripple flows through the economy.

They all pay sales taxes and income taxes. In addition, hunting product manufacturers pay excise taxes to benefit conservation.

North, South, East and West, hunting’s positive economic impact creates jobs and helps urban and rural communities throughout the United States. Just ask retailer Butch Hebert, owner of Boone’s Corner in beautiful southwest Louisiana, who said, “We beef up our inventory 15%-20% each year to prepare for hunting season.”

Top Ten States Ranked by Annual Hunting-Related Retail Sales

	Retail Sales	Total Multiplier Effect
1 Texas	\$1,761,285,042	\$3,636,484,738
2 Pennsylvania	\$1,165,059,772	\$2,275,366,632
3 Wisconsin	\$960,104,751	\$1,770,420,230
4 New York	\$891,031,344	\$1,529,508,716
5 Alabama	\$799,303,993	\$1,576,405,455
6 Ohio	\$713,886,248	\$1,539,487,897
7 Michigan	\$671,670,664	\$1,281,527,914
8 Minnesota	\$664,200,412	\$1,316,964,312
9 Tennessee	\$623,025,977	\$1,321,659,467
10 Louisiana	\$581,066,601	\$992,471,903

And down the road, Trudy Young of Young’s Grocery, said she banks on extra sales of food, cooking supplies and everything from batteries to toilet paper when hunting season begins in this outdoor paradise.

“Hunter-vationists”

“Most hunters don’t realize the enormous effect they can have on state and national economies,” said John Baughman, Executive Vice President of the International Association of Fish and Wildlife Agencies (IAFWA). “And most elected officials don’t realize the conservation contributions and economic power of hunters and the hunting business. This report should make it clear,” he said.

Big Wheels Keep on Turning, Proud Hunters Keep on Spending

Hunters travel near and far to spend time in beautiful surroundings. In person or via phone calls, faxes and emails, they plan their outings with friends and families, as they anticipate the adventure, similar to planning the family vacation. When they drive to rural destinations and spend the night, the cumulative effect is amazingly big. Even after September 11, 2001, when the travel industry was suffering, hunters were hitting the road and patronizing rural motels, diners, gas stations and other businesses. On lodging alone for the entire year 2001, hunters spent \$276 million! Without the steadfast economic input from hunters, America’s economy—including rural businesses that rely on tourism—would suffer.

Theodore Roosevelt Conservation Alliance

State natural resource agencies manage fish and wildlife for the benefit of *all* citizens, regardless of whether they hunt or fish. Yet, sportsmen who buy licenses and purchase equipment provide most of their budgets. Despite the significant contributions by sportsmen and their supporting industries, wildlife agencies constantly hear the old, worn-out argument about “jobs versus the environment.” The fact is, employment, economy and environment all start with “E.” Healthy natural resources create jobs, enhance the economy and support both rural and urban communities that properly manage those resources.

“Well, hunters and the hunting industry can argue for both healthy habitat and jobs concurrently,” according to IAFWA President Brent Manning, who is also the long-time head of the Illinois Department of Natural Resources. “It takes money to conserve and restore habitat and wildlife. Sportsmen are the single largest source of conservation revenues. When people can access healthier habitats, they have more fun and spend more money. This cycle creates jobs and boosts revenues for greater conservation efforts. Everyone wins.”

The numbers in this report make it easy to understand the economic impact of hunting in every state. While everyone knows that hunting is good for families, our social well-being and environmental stewardship, they often overlook its

Mark LaBarbera, Outdoor Heritage Education Center

important economic impact. However you look at it, hunting is a major boost to the economy and the environment. As this report clearly shows, Americans have more reasons than ever before to support hunting—an activity that greatly benefits the country as a whole. The same whistling of waterfowl wings and spring gobbles that inspired George Washington, Thomas Jefferson and our other American forefathers, can stir the imaginations and economies of future generations. In the end, history and our heirs will judge our leadership by the actions we take and the decisions we make regarding our resources—natural, social and economic—during our time on Earth.

Tested and Reliable

Most of the statistics in this report are from the 2001 National Survey of Fishing, Hunting and Wildlife-Associated Recreation, initiated at the request of state natural resource agencies, and conducted every five years for the U.S. Fish and Wildlife Service by the U.S. Census Bureau. The numbers are based on U.S. citizens 16 years of age and older. Independent third parties, such as resource economics consulting firm Southwick Associates, use proven research methods to develop economic information and analyze the data.

* = small samples size (45 or less)

! = sample size too small to report reliably (25 or less)

NOTE: The U.S. total does not equal the sum of state data as economic activity across state borders are not included in the state totals, in addition to other factors.

NOTE: The expenditures reported above are greater than those reported by the U.S. Fish and Wildlife Service. Sportsmen often attributed purchases to both fishing and hunting (especially vehicles and big-ticket items). These items were not included in the Service's hunting expenditure estimates. Such items were included above by prorating each item's cost based on each respondent's total days of hunting and fishing activity.

* = small samples size (45 or less)

! = sample size too small to report reliably (25 or less)

NOTE: The U.S. total does not equal the sum of state data as economic activity across state borders are not included in the state totals, in addition to other factors.

NOTE: The expenditures reported above are greater than those reported by the U.S. Fish and Wildlife Service. Sportsmen often attributed purchases to both fishing and hunting (especially vehicles and big-ticket items). These items were not included in the Service's hunting expenditure estimates. Such items were included above by prorating each item's cost based on each respondent's total days of hunting and fishing activity.

Economic Impact of Migratory Bird and Upland Bird Hunting, 2001

Upland Birds = quail, pheasant and grouse.

* = small samples size (45 or less)

NOTE: States not listed have sample sizes too small to report reliably (25 or less).

NOTE: The U.S. total does not equal the sum of state data as economic activity across state borders are not included in the state totals, in addition to other factors.

NOTE: The expenditures reported above are greater than those reported by the U.S. Fish and Wildlife Service. Sportsmen often attributed purchases to both fishing and hunting (especially vehicles and big-ticket items). These items were not included in the Service's hunting expenditure estimates. Such items were included above by prorating each item's cost based on each respondent's total days of hunting and fishing activity.

* = small samples size (45 or less)

! = sample size too small to report reliably (25 or less)

NOTE: The U.S. total does not equal the sum of state data as economic activity across state borders are not included in the state totals, in addition to other factors.

NOTE: The expenditures reported above are greater than those reported by the U.S. Fish and Wildlife Service. Sportsmen often attributed purchases to both fishing and hunting (especially vehicles and big-ticket items). These items were not included in the Service's hunting expenditure estimates. Such items were included above by prorating each item's cost based on each respondent's total days of hunting and fishing activity.

This hunting economic impact study was produced by Southwick Associates, Inc, Fernandina Beach, FL with help from Mark LaBarbera and the Outdoor Heritage Education Center, Shakopee, MN. Funding was provided by the International Association of Fish and Wildlife Agencies' Animal Use Issues Committee through the U.S. Fish and Wildlife Service under Cooperative Grant Agreement No. DC N-10-RO using Federal Aid in Wildlife Restoration administrative funds.
